FixTray

Launch Go/No-Go Checklist

Complete operational checklist for customer-ready launch sign-off

Launch Rule

1. No open critical issues
2. No open high issues in auth, billing, and core work-order flows
3. All mandatory checks below are marked PASS with evidence links
4. Final sign-off from Engineering, Product, Operations, and Support

Generated: 4/25/2026, 1:25:55 AM

Section Summary and Release Sign-Off

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] 1) Product Scope Lock — 10 checks				
2	[ ] 2) Identity, Auth, and Access Control — 14 checks				
3	[ ] 3) Subscription and Billing — 15 checks				
4	[ ] 4) API Surface and Data Contracts — 12 checks				
5	[ ] 5) Database and Data Integrity — 11 checks				
6	[ ] 6) Integrations and Secrets — 12 checks				
7	[ ] 7) Frontend UX and Client Quality — 12 checks				
8	[ ] 8) Performance and Scalability — 11 checks				
9	[ ] 9) Security Hardening — 12 checks				
10	[ ] 10) Reliability, Monitoring, and Operations — 11 checks				
11	[ ] 11) QA and Release Validation — 10 checks				
12	[ ] 12) Legal, Compliance, and Trust — 9 checks				
13	[ ] 13) Support and Customer Success Readiness — 10 checks				
14	[ ] 14) Launch Day Controls — 10 checks				
15	[ ] 15) First 72 Hours Post-Launch — 10 checks				

Status Legend: Pass = done, Fail = release blocker, Blocked = external dependency

Initials: Eng ___ Prod ___ Ops ___ Support ___

1) Product Scope Lock

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] Feature list for v1 is frozen				
2	[ ] All coming-soon features are clearly labeled				
3	[ ] No unfinished pages linked from navigation				
4	[ ] Pricing and plan limits are final and consistent				
5	[ ] All plan names/descriptions match billing system				
6	[ ] Customer-facing copy reviewed and approved				
7	[ ] Error messages are user-friendly and actionable				
8	[ ] Empty states exist for major pages				
9	[ ] No placeholder/demo data in production views				
10	[ ] Release notes for v1 are prepared				

Status Legend: Pass = done, Fail = release blocker, Blocked = external dependency

Initials: Eng ___ Prod ___ Ops ___ Support ___

2) Identity, Auth, and Access Control

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] Login works for every role				
2	[ ] Logout clears session and refresh tokens correctly				
3	[ ] Session expiration and refresh behavior tested				
4	[ ] Password reset flow works end-to-end				
5	[ ] Email verification flow works end-to-end				
6	[ ] 2FA flow works for enabled users				
7	[ ] Role-based access is enforced server-side				
8	[ ] Unauthorized API calls return 401/403				
9	[ ] Privilege escalation attempts are blocked				
10	[ ] Superadmin/admin routes are middleware-protected				
11	[ ] Manager/tech/shop restrictions enforced in middleware				
12	[ ] Tenant/shop scoping enforced in all data queries				
13	[ ] Rate limiting on login/reset endpoints verified				
14	[ ] CSRF protection active on state-changing endpoints				

Status Legend: Pass = done, Fail = release blocker, Blocked = external dependency

Initials: Eng ___ Prod ___ Ops ___ Support ___

3) Subscription and Billing

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] Stripe checkout creates subscriptions correctly				
2	[ ] Trial start behavior works as expected				
3	[ ] Upgrade flow works and updates access correctly				
4	[ ] Downgrade flow works and applies restrictions safely				
5	[ ] Cancellation flow works with correct end-date handling				
6	[ ] Reactivation flow works				
7	[ ] Card update flow works				
8	[ ] Failed card payment handling works				
9	[ ] Webhook signature verification is enforced				
10	[ ] Duplicate webhooks are idempotent				
11	[ ] Webhook retries/delays handled safely				
12	[ ] DB subscription state matches Stripe state				
13	[ ] Plan feature gates enforced in UI and API				
14	[ ] Plan limits (users/shops/features) enforced				
15	[ ] Invoices/receipts available to customer				

4) API Surface and Data Contracts

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] Every frontend API call maps to existing route				
2	[ ] No 404 API calls in normal browser usage				
3	[ ] Request validation exists on all write routes				
4	[ ] Response shapes are consistent and documented				
5	[ ] Error codes standardized across APIs				
6	[ ] Pagination exists for large lists				
7	[ ] Sorting/filtering deterministic and tested				
8	[ ] Auth requirements explicit per endpoint				
9	[ ] Sensitive fields excluded from responses				
10	[ ] Rate limiting present for sensitive/public routes				
11	[ ] Legacy endpoints removed or redirected				
12	[ ] Internal-only endpoints not publicly exposed				

5) Database and Data Integrity

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] Schema finalized for launch scope				
2	[ ] Migrations apply cleanly in staging and production				
3	[ ] Migration rollback plan documented/tested				
4	[ ] Indexes and foreign keys reviewed for key queries				
5	[ ] Unique constraints set for identity-critical fields				
6	[ ] Timezone strategy consistent across app				
7	[ ] Monetary precision strategy validated				
8	[ ] Audit trail for critical actions exists				
9	[ ] Seed/test data removed from production				
10	[ ] Data retention and deletion process defined				
11	[ ] Data export path documented				

6) Integrations and Secrets

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] All required env vars present in production				
2	[ ] No placeholder keys remain				
3	[ ] Stripe keys + 10 plan IDs configured and tested				
4	[ ] Resend email credentials configured and tested				
5	[ ] Twilio credentials and sender vars configured and tested				
6	[ ] Web push VAPID keys configured and tested				
7	[ ] Webhook secrets configured and validated				
8	[ ] Third-party callback URLs match production domain				
9	[ ] Secrets are stored securely (not in source control)				
10	[ ] Previously exposed secrets rotated				
11	[ ] Service account permissions least-privilege				
12	[ ] Integration failure fallback paths are user-safe				

7) Frontend UX and Client Quality

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] Core flows validated on desktop and mobile				
2	[ ] Responsive layout validated at common breakpoints				
3	[ ] Keyboard navigation works for key workflows				
4	[ ] Accessibility baseline checks pass (labels/focus/contrast)				
5	[ ] Loading/error/retry states present and clear				
6	[ ] Form validation messaging is clear				
7	[ ] No frontend console errors in normal use				
8	[ ] No broken links or dead-end routes				
9	[ ] No flash of unauthorized content before redirect				
10	[ ] File uploads work for supported types/sizes				
11	[ ] Date/time/currency formatting is consistent				
12	[ ] Target browser compatibility tested				

8) Performance and Scalability

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] Initial load performance meets budget				
2	[ ] Critical pages are within performance targets				
3	[ ] Slow APIs identified and optimized				
4	[ ] N+1 query hotspots fixed				
5	[ ] Caching strategy implemented for expensive reads				
6	[ ] Socket features stable under load				
7	[ ] Background job throughput tested				
8	[ ] Memory profile stable over long sessions				
9	[ ] DB pool sizing validated				
10	[ ] Basic load test run for peak scenarios				
11	[ ] Performance baseline captured for regressions				

9) Security Hardening

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] HTTPS enforced in production				
2	[ ] Secure cookie flags configured correctly				
3	[ ] CSP configured and tested				
4	[ ] CORS policy strict and correct				
5	[ ] Input sanitization on untrusted content validated				
6	[ ] Upload validation/scanning enforced				
7	[ ] XSS protections verified in rich content paths				
8	[ ] Open redirect/SSRF checks completed				
9	[ ] Dependency vulnerability scan triaged				
10	[ ] No secrets or tokens in logs				
11	[ ] Incident response runbook prepared				
12	[ ] Security escalation contacts documented				

10) Reliability, Monitoring, and Operations

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] Health endpoints report meaningful status				
2	[ ] Sentry enabled in production with release tags				
3	[ ] Uptime monitoring active for app and APIs				
4	[ ] Alerts configured for 5xx spikes				
5	[ ] Alerts configured for auth failures				
6	[ ] Alerts configured for payment/webhook failures				
7	[ ] Alerts configured for email/SMS provider failures				
8	[ ] Request correlation IDs included in logs				
9	[ ] On-call ownership assigned for launch window				
10	[ ] Operational runbooks available for top incidents				
11	[ ] Rollback plan tested and documented				

11) QA and Release Validation

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] Smoke suite up to date and passing				
2	[ ] Regression suite run on release candidate				
3	[ ] E2E tests cover auth, billing, and core work order flow				
4	[ ] Manual exploratory pass completed				
5	[ ] Defects triaged with severity labels				
6	[ ] All blocker defects fixed and verified				
7	[ ] All critical defects fixed and verified				
8	[ ] Known issues list prepared and approved				
9	[ ] Release candidate tagged and immutable				
10	[ ] Final UAT sign-off captured				

Status Legend: Pass = done, Fail = release blocker, Blocked = external dependency

Initials: Eng ___ Prod ___ Ops ___ Support ___

12) Legal, Compliance, and Trust

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] Terms of Service published and accessible				
2	[ ] Privacy Policy published and accessible				
3	[ ] Consent messaging aligns with data practices				
4	[ ] Billing/refund/cancellation terms are visible				
5	[ ] Data retention policy documented				
6	[ ] Data deletion request process documented				
7	[ ] Support contact channels visible in product				
8	[ ] Target-market legal requirements reviewed				
9	[ ] Escalation path for legal/privacy requests documented				

13) Support and Customer Success Readiness

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] Support channels are live (email/help desk/chat)				
2	[ ] Triage categories are defined				
3	[ ] SLA targets are defined				
4	[ ] Support-to-engineering escalation process defined				
5	[ ] Troubleshooting playbooks prepared				
6	[ ] Common issue response templates prepared				
7	[ ] Account recovery procedures documented				
8	[ ] Billing dispute process documented				
9	[ ] Customer onboarding guide prepared				
10	[ ] Week-1 customer check-in process scheduled				

14) Launch Day Controls

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] Code freeze active for launch window				
2	[ ] Deployment owner and schedule confirmed				
3	[ ] Rollback trigger criteria agreed				
4	[ ] Launch war-room communication channel active				
5	[ ] Live metrics dashboard open pre-deploy				
6	[ ] Post-deploy smoke tests executed immediately				
7	[ ] Post-deploy payment test transaction verified				
8	[ ] Post-deploy email and SMS tests verified				
9	[ ] One full golden-path run completed post-deploy				
10	[ ] Launch announcement only after all mandatory checks pass				

Status Legend: Pass = done, Fail = release blocker, Blocked = external dependency

Initials: Eng ___ Prod ___ Ops ___ Support ___

15) First 72 Hours Post-Launch

#	Launch Check	Owner	Status (Pass/Fail/Blocked)	Evidence Link / Screenshot	Notes
1	[ ] Error rates reviewed hourly day 1				
2	[ ] Auth failure trends monitored hourly day 1				
3	[ ] Payment conversion monitored continuously				
4	[ ] Webhook failure queues monitored				
5	[ ] Support ticket themes reviewed daily				
6	[ ] Top user-reported issues triaged same day				
7	[ ] Hotfix path available and tested				
8	[ ] Daily stakeholder summary delivered				
9	[ ] Stabilization backlog maintained				
10	[ ] Post-launch retrospective scheduled				

Status Legend: Pass = done, Fail = release blocker, Blocked = external dependency

Initials: Eng ___ Prod ___ Ops ___ Support ___

Final Go/No-Go Sign-Off

Role	Owner Name	Decision (GO / NO-GO)	Date/Time	Signature / Initials	Notes
Engineering Lead					
Product Lead					
Operations Lead					
Support Lead					
Security Reviewer					
Final Launch Approver					

Release Decision: GO NO-GO

All mandatory checks must be PASS with evidence before selecting GO.
